I. INTRODUCTION

This e-commerce brief highlights results of an e-tailing group/WinBuyer study *Comparison Shopping is a Way of Life*. The study, completed in August ‘09 examines three critical components of comparison shopping:

1) How invested consumers are in shopping around prior to purchase including time spent and sites visited as part of their typical online shopping behavior. 
2) How valuable an onsite price comparison would be and its impact on merchant selection, 
3) How customer loyalty is impacted based on making such an application part of one’s everyday shopping behavior

The evolution of comparison shopping

Consumers have always been inclined to price shop as haggling for the best price has been part of marketplaces since ancient times. The Internet has upped the ante on price comparison with technology fueling the hunt for the best price as our survey clearly demonstrated. With the click of a mouse a customer can find the same products a merchant sells; often at a better price. Though price may only be one of the variables in making a purchase decision, we all know that it is one of the most important.

Initially consumers embraced price comparison engines (CSEs) as exemplified by the mission statements of these three top players with minimal distinctions:

<table>
<thead>
<tr>
<th>CSE</th>
<th>Mission Statement</th>
</tr>
</thead>
<tbody>
<tr>
<td>Shopping.com</td>
<td>To help consumers anywhere use the power of information to easily find, compare and buy anything online – in less time and for the best price!</td>
</tr>
<tr>
<td>Shopzilla</td>
<td>Helps shoppers find the best value for virtually anything they want to buy from thousands of online retailers.</td>
</tr>
<tr>
<td>PriceGrabber</td>
<td>Our unique shopping site offers extensive inventory at the lowest prices by comparing products, product reviews and merchant deals for all of your shopping needs.</td>
</tr>
</tbody>
</table>

The barrier to entry has shifted once again as a result of Google now offering comparison functionality through Google Products. Under this scenario they are allowing merchants to send product feeds for free; making it more difficult for CSEs to compete in today’s comparison climate. At the same time CSEs are seeing increasing cost-per-click expenses on Google and their dependency on Google to drive further exacerbates this problem.

OCP- The Onsite Comparative Pricing Solution

Now we are seeing the next evolution of comparison shopping, where competitive pricing is made available directly on a merchant’s site. The dynamics have changed with prices clearly in context on the product page, the key point customer decision-making.
Shoppers no longer need to leave a retailer’s site to get a sense of competitive pricing. While industry leaders including Amazon and Buy.com are providing this customer convenience on their product pages, technology solutions companies like WinBuyer are enabling other e-commerce sites to also experience the benefits of OCP through their own proprietary technology engine; offering a cost-effective alternative to building one’s own solution.

This report showcases a series of examples reflecting onsite price comparison (OCP) shopping and how consumers today can take advantage of such technology. As merchants look to understand if this kind of application is right for their business, we have included a series of questions that can be asked to ensure value for your brand. Lastly, once a merchant concludes that such an application is appropriate for their brand, a “build vs. buy” chart facilitates decision-making guidance.

Whether or not, your products and categories are ripe for shopping and comparison prices, understanding consumer behavior will always be very valuable and consideration of evolving onsite comparison technology important.
II. EXECUTIVE SUMMARY

Consumers are invested in finding the lowest price

- 94% of online shoppers invest time to find the lowest price for commodity products
- 36% spend 30+ minutes comparison shopping before making a decision on purchasing a commodity product; 65% spend 16+ minutes doing so
- 51% visit 4+ sites before finalizing a purchase
- Efficiency of price comparison and the ability to merely Google it, check Amazon’s prices or visit a few competitors is core to current consumer shopping behavior
- TCO (total cost including shipping and handling) and product price are the two most important influencers for online purchase decisions

Time and money savings drive consumer interest in on-site competitive pricing comparison tools such as WinBuyer

- 57% like the convenience of having the information on the product page while over 40% believe it would save them both money and time
- 63% rate comparing competitive prices onsite very to somewhat valuable; 1 in 3 shoppers give this capability a “10”
- 58% would expect all retailers of commodity products to incorporate this kind of Onsite Comparative Pricing tool into their shopping experience

Merchant credibility and loyalty grows with onsite comparison product usage

- 78% would be likely to return to a retailer that shows competitors’ prices on their website; 36% would be much more loyal
- Factoring other variables beyond price, 84% would check out other sites and then consider returning to the original retailer
- 52% of consumers would find on-site competitive pricing credible
- 53% of consumers would no longer feel compelled to comparison shop elsewhere
III. RESEARCH FINDINGS

In this price conscious age, 94% of online shoppers invest time to find the lowest price for commodity products according to the new e-tailing group/WinBuyer research study “Comparison Shopping is a Way of Life.” Feedback from 1,025 frequent online shoppers who completed an online survey confirm that streamlining this activity via onsite comparative pricing (OCP) presents an opportunity for merchants to improve conversion and garner excellent online retention by showing competitive prices on the product detail page during a key customer decision-making time.

Savvy consumers are using the Internet to find value, particularly when shopping for commodity products. Efficiency of price comparison and the ability to merely Google it, check Amazon’s prices or visit a few competitors is core to today’s consumer shopping behavior.

Throughout their comparison shopping consumers seek out TCO (total cost including shipping and handling) and product price, named the two most important influencers for online purchase decisions.

![Chart: Top 2 Most Important Influencers](chart.jpg)

When comparison shopping, 36% of these consumers are spending over one-half hour comparison shopping before making a decision on purchasing a commodity product and 65% are spending 16 minutes or more doing so. With onsite comparative pricing (OCP) shopper time can be better spent on a merchant’s site purchasing additional product.
As 95% of these online shoppers currently visit at least two websites before finalizing a purchase and 51% check out four or more sites, **onsite applications like WinBuyer would help customers save time in their quest for the lowest priced products.**

**Onsite comparisons favored when seeking the lowest price online**

When comparison shopping, 63% of these consumers rate comparing competitive prices **onsite** very to somewhat valuable. On the consumer value scale, 1 in 3 shoppers give the capability of rating competitive prices without leaving a retailer’s website a “10.”
Product page competitor price comparisons aid retention

The *convenience* of having the information on the *product page* is important to 57% while over 43% believe this capability would *save them both money and time*. One in three consumers also feel that this kind of tool would *increase their confidence in buying from the site on which it was found*.

With such benefits in place, over one-half (53%) of those surveyed would be less compelled to comparison shop elsewhere if they could access competitors’ pricing from a retailer’s website.
Merchant credibility and loyalty grows with onsite comparison product usage
From the merchant perspective, this survey dispels the notion that displaying competitive prices will encourage customers to abandon that retailer and go to a competitor. Conversely, findings provide assurance that 78% would likely return to a retailer that shows competitors’ prices on their website and 36% would be much more loyal to that merchant.

Specifically looking at how such a tool would impact loyalty, 78% responded that they would be more likely to return to a retailer that shows competitors’ prices on their website.

Supporting deployment of this application, even when competitive prices shown are lower, 39% would further trust and be motivated to buy from that retailer again. Intrinsic elements beyond price would also be a factor for 4 in 10 online shoppers.
With variables beyond price impacting their final decision, 84% would check out other sites and then consider returning to the original retailer. Just 9% would abandon a site that showed lower competitive prices.

A majority (52%) of these online shoppers believe that competitive pricing on an individual site would be credible. Understandably many remain neutral on the question of credibility until they experience proof-of-concept but only 7% expressed doubt relative to the credibility of this model.
Looking ahead, 58% would expect all retailers of commodity products to incorporate this kind of competitive comparison pricing tool into their shopping experience.

The findings speak for themselves - consumer inclination is to compare products and prices in hopes of finding the right item at the right price.

The web's valued role, as a time and money-savings tool, can now be extended even further with WinBuyer's onsite comparative pricing (OCP).

Such comparison capabilities are ripe for many retailers that are embracing consumer demands for comprehensive information in support of a confident buying decision.
Survey methodology and demographics

An online questionnaire was completed by 1,025 adults (51% female/49% male) who shopped online 4 or more times during the past year; spending over $500.
IV. MERCHANT SHOWCASE

The following showcase will help visualize the continuum of options for comparison shopping. They range from portal-based comparison shopping engines (CSEs) to both build and buy OCP models, plus their corresponding onsite locations as shown via product page execution.

Shopping.com Digital Camera Comparison and Sort Results

Shoppers utilize a comparison shopping engine (CSE) to find product offsite, taking advantage of filtering and sort functionality.
Gamequest Spiderman Video Product Page

Shoppers can immediately compare prices of any given product from a series of third-party merchants directly from the product page. Of note, although in the example shown the comparative pricing was all lower than GameQuest’s featured price, this merchant gained customer trust and experienced a lift in sales from shoppers who appreciated seeing the options yet preferred to shop here.

Buy.Com Acer Viewsonic Monitor Product Page

Shoppers can immediately compare prices of any given product at a series of competitors directly from the product page.
Boaters World Garmin Product Page

When product is out of stock or a search returns null results, retailers suggest merchants with availability providing a service to shoppers and in return the sending merchant receives an affiliate fee.
V. Q/A TO SIZE UP COMPARISON SHOPPING NEEDS

1) Do you compete mainly on price or do you have other values that are important to the customer such as brand, service, and warranty that customers evaluate when comparing your site to others?
2) Are the products you sell frequently price shopped by consumers?
3) Do you have significant competitors for the products that you sell?
4) Do your customers research your products/categories prior to making purchase decisions?
5) Would your customers benefit from seeing competitor products on your website?
6) Are you looking to avoid customers leaving your site because they’re hunting around for better prices?
7) Are your customers abandoning your site because you don’t offer onsite comparison pricing?

VI. BUILD VS. BUY DECISION-MAKING GRID

The following factors must be taken into consideration prior to making a build vs. buy decision. With software continually evolving and pricing more desirable than ever before, we find that that today many merchants are opting to buy versus build.

This option certainly allows merchants to take advantage of quick deployment without ceding much control. Looking ahead they can continually take advantage of an application’s evolution throughout the product life-cycle.

WinBuyer provides retailers with an Onsite Comparative Pricing (OCP) application, which enables retailers to accelerate consumer purchase behavior by embedding comparative shopping information into a retailer’s site at the point of sale. Over 150 merchants are realizing how WinBuyer can benefit them through increased sales conversion, greater average order size, improved site stickiness and enhanced consumer confidence. WinBuyer was founded in 2005 and is headquartered in Tel Aviv, Israel, with offices in Scottsdale, Arizona and London, England.
